

System Architecture (Paper Grade)

Two-tier architecture:

- Discovery Layer (tct_core / Anyclaw)
- Validation Layer (fusion_engine_v5 + OpenMC)

This separation enables rapid hypothesis generation while preserving physical fidelity.

Block Diagram

```
[Discovery Layer]
tct_core → li_current + supervisor → metrics
↓
candidate_packet.json

[Validation Layer]
OpenMC → blanket + neutronics
fusion_engine_v5 → reactor simulation
↓
verification_summary.json

[Decision Layer]
compare → promote / reject
```
